Your Gutter Installation Expert

Alu-Rex products are the most advanced on the market. Incorporating the latest gutter technology, they offer superior durability and debris protection. They're designed to the highest standards by Alu-Rex experts and installed by our quality-driven teams. You can extend the lifespan of any seamless gutter by installing it with high-performance Alu-Rex products.

DoublePro® Gutter

DoublePro® is a patented, dual-action gutter protection system designed to withstand the harshest weather conditions in North America. It keeps ice and debris out of your gutters, ensuring year-round performance. This Continuous Hanger™ system supports up to 425 lb per linear foot and drains up to three times the volume of rain from the heaviest recorded storms.

T-Rex® Gutter

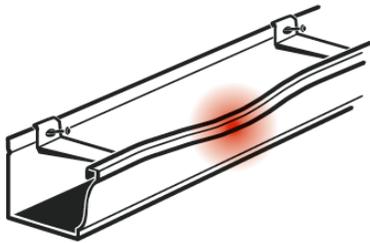

T-Rex® is also a continuous hanger™ system for gutters that secures rain gutters firmly to houses, making them 50% stronger than gutters mounted with spikes and hangers spaced at intervals. It supports up to 250 lb per linear foot, providing enhanced durability and stability.

Continuous Hanger™: Explained

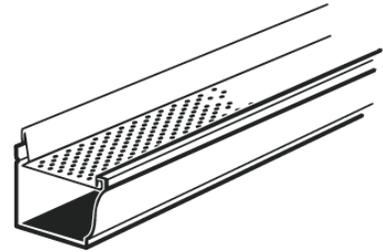

You might not know that gutters were once installed using nails or invisible hangers spaced every 24 inches. While these systems were fairly strong, they left long sections of aluminum gutters vulnerable to snow and ice damage. Additionally, the silicone sealant at the corners was exposed to sun damage. That's why gutters are now installed with continuous hanger™ systems that both strengthen and seal the gutters. It's like having hundreds of fasteners along the entire length of the gutter, each perforated to allow water to drain freely.

Rain gutters are commonly installed with spaced hangers that cause weak spots on the gutter between each hanger.

To avoid weak spots, hundreds of hangers would need to be added, but this is not a very efficient practice.

With a continuous hanger™, the rain gutters are reinforced along their entire length.

Gutter Guard

Let it **Rain**. Let it **Fall**.
We've got you **covered**

Gutter guards are essential for preventing clogs and reducing maintenance. Our Gutter Clean Pro® is a retrofit solution featuring advanced dual-layer protection, combining large oblong openings with offset micro-perforations to block debris while ensuring excellent water flow. We also offer a proven single-layer retrofit option: the long-established Gutter Clean System®, which uses perforated aluminum and wind action to keep gutters clear. Both systems provide durable, low-maintenance protection that professionals rely on for reliable, year-round performance.

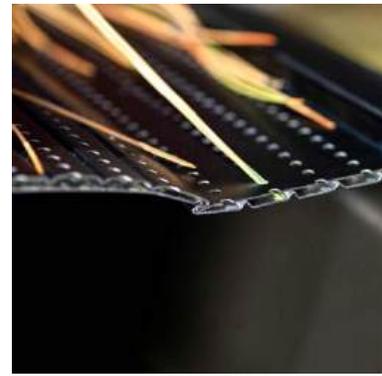

gutter clean pro®

Born from decades of innovation and powered by patented technologies, Gutter Clean Pro® delivers a new generation of performance and reliability through its dual layers of perforated aluminum.

The enhanced U-shaped design of Gutter Clean Pro®, featuring Rollback+™ technology, uses an elevated front curve to redirect excess rainwater back into the gutter, effectively controlling overflow.

Equipped with advanced Vortex™ technology, Gutter Clean Pro® uses dual membranes to create powerful suction, draining up to three times the volume of water compared to the heaviest recorded storms.

With Eclipse™ technology's precisely offset holes in the dual-layer design, Gutter Clean Pro® allows water to flow freely while effectively blocking debris, including fine particles like pine needles, and preventing clogs before they start.

The Gutter Clean Pro® retrofit system features dual-layer protection with large oblong openings and offset micro-perforations that block even fine debris like pine needles while maintaining optimal water drainage. It's backed by a lifetime clog-free warranty.

For a proven single-layer solution, the Gutter Clean System® remains a reliable choice for existing gutters in low-debris areas. Its perforated aluminum design effectively handles larger debris and has stood the test of time, backed by a 25-year clog-free warranty.
